

ATTACH is a non-ionic spreader-sticker for use in two types of spray applications. ATTACH can be used with many soil-applied herbicides to reduce the effects of volatility, leaching and photodegradation. ATTACH can also be applied with foliar sprays to increase initial deposition and to delay photodegradation.

FEATURES

- OMRI-certified for organic production
- Soil or foliar-applied application flexibility

RATES

Foliar applied: 4-16 fl oz/100 gal spray solution; Ground applied: 16-32 fl oz/100 gal spray solution

GROWER BENEFITS

- Unique pinene chemistry reduces photodegradation, leaching and volatility
- Reduces leaching dissipation of many soil applied herbicides
- Increases contact, wetting and adhesion
