

**Altura™ NST** is a phosphate and zinc nutritional designed to provide immediately available phosphate and to maintain availability well into the growing season. Altura NST is optimized with C<sup>2</sup> and Nutrient Solubilizing Technologies for the needs of permanent and specialty crops. When applied in a drip, drench or in-line application, Altura NST maximizes nutrient uptake and extends availability for a robust approach to early season nutrient management.

## FEATURES

- C<sup>2</sup> Technology optimized with Nutrient Solubilization Technology to maximize phosphorus and zinc availability
- Contains highly available Ortho Phosphate and readily accessible zinc with room for tank mix customization

## ANALYSIS

6-20-0 0.2% Zinc with NST + C<sup>2</sup> Technology

## GROWER BENEFITS

- NST solubilizes nutrients and inoculates roots with beneficial bacteria to provide extended nutrient access for a season long nutritional solution
- C<sup>2</sup> Technology maintains applied nutrient availability and helps release tied up native nutrients

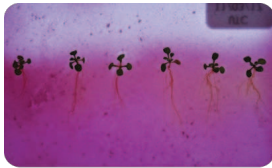

## RATES

2-10 gal/A for most crops and applications

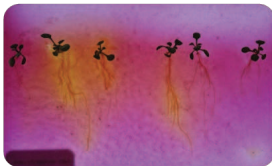

## ALTURA NST

### Plants with NST Can Utilize Unavailable P

Insoluble P source was solubilized (yellow color) only by roots of NST-treated plants

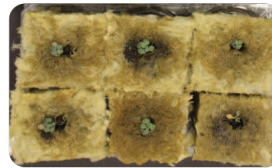

Control

NST

### NST Makes Unavailable P Readily Available

Plant-based assays in growth room

No Available P added

Available P added
