

CIRCA[®] Zn is from our line of concentrated liquids specifically designed for coating prilled and granular fertilizers with micronutrients. Circa micronutrients allow for accurate and reliable access to essential soil applied micronutrients to support yield and quality. Circa Zn pairs with your dry N, P or K applications for a flexible whole acre fertility solution designed around your farm's needs.

FEATURES

- Designed to coat all types of dry fertilizers for maximum distribution across the acre
- Highly concentrated formulations deliver high levels of key nutrients
- Compatible with Titan[®] XC and other nutrient use efficiency tools for an advanced approach to dry fertilizer

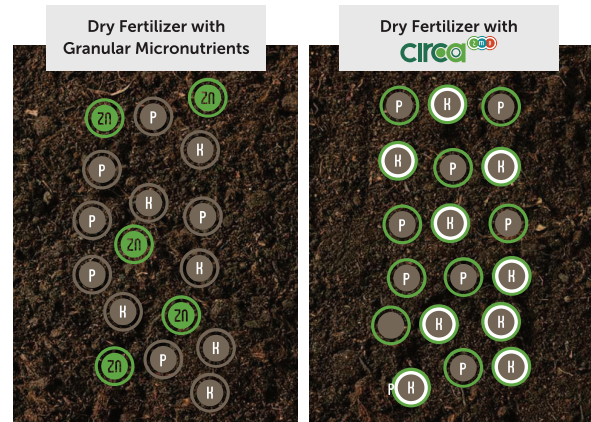

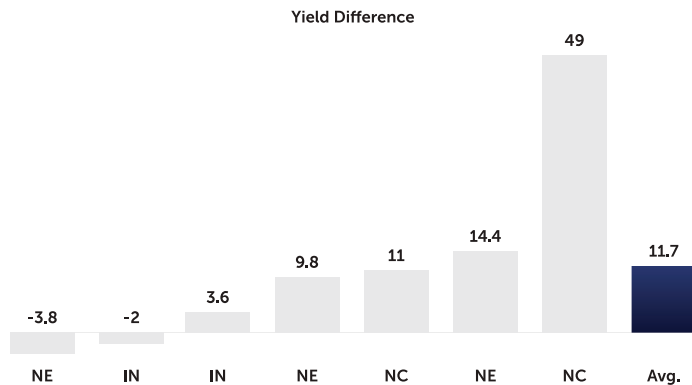

GROWER BENEFITS

- Convenient and efficient way to address early season zinc needs in many crops where liquid injection isn't an option
- Distribution and efficiency is maximized by the micronutrient being coated on each piece of dry fertilizer applied
- When paired with Titan XC, Circa allows for a high efficient and completely customized dry fertilizer program
