

**PROLOGUE®** is designed to benefit growers focused on early season applications of phosphate and zinc. The unique combination of components in **PROLOGUE** are engineered to increase the efficiency of existing and applied phosphate for a higher performing and more sustainable approach to early season nutrition.

## PRODUCT FEATURES

- Built with Nutrient Solubilization Technology
- Provides two unique nutrient solubilization processes for more nutrition into your crop
- Engineered to affect existing and soil-applied phosphate

## GROWER BENEFITS

- Designed for early season applications or coming out of dormancy for permanent crops to support key phosphorus and zinc needs
- Optimized to promote biological availability of phosphate
- Highly available chelated zinc that supports key early season functions

## ANALYSIS

5-0-0 6.3% Zn

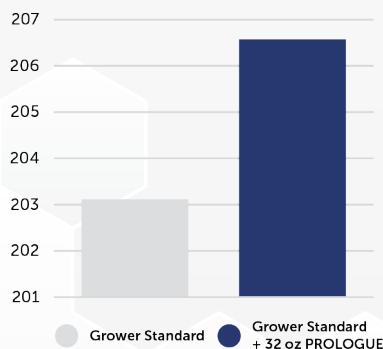

## RATES

2-6 pt/A for most crops and applications

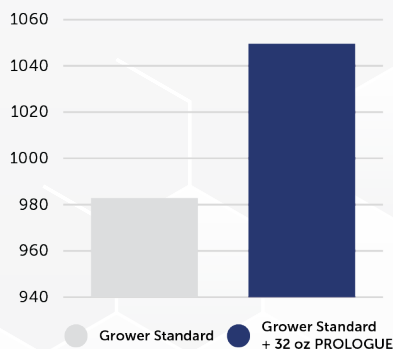

## DATA & RESULTS

### I PROLOGUE

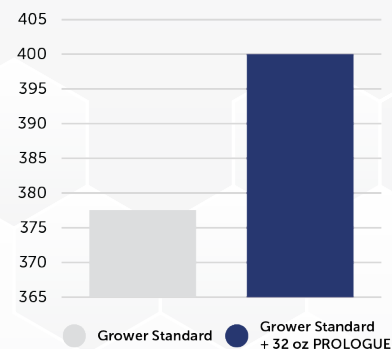

Average of 28 Corn Trials

Average of 4 Cotton Trials

Average of 14 Potato Trials
