

ReaX™ Manganese is a liquid manganese designed for at-planting and drip, drench, and inline applications with foliar flexibility. Enhanced with unique C² soil health and plant performance technology, ReaX Manganese is designed to improve nutrient availability to meet the yield and quality goals of growers in a variety of growing conditions year after year.

FEATURES

- Unique C² formulation maximizes overall nutrient availability and mobility in the soil and superior uptake in the plant
- Flexible formulation designed for soil applications with foliar flexibility

ANALYSIS

4-0-0 4% Mn with C² Technology

GROWER BENEFITS

- Provides 4% manganese for plant energy production and supports plant performance by encouraging nutrient utilization in the crop
- Stabilizes nutrients prone to movement in the soil for more reliably available nutrition

RATES

1-4 qt/A for most crops and applications

C² TECHNOLOGY

Carbon

- Unique carbon components drive chemical and biological activity in the soil as well as promote soil structure.
- Carbon serves as a storage structure for the beneficial soil microbiome.

Extracted

- Proprietary method creates customized carbon extractions to meet the unique needs of each nutrient with which they are combined.
- Extraction method results in a more stable end-product.

Carbohydrate

- A food source for beneficial soil microbes as well as an energy source for the plant.
- Assist in complexing nutrients for increased availability.

Reacted

- Nutrients are reacted under heat and pressure to form a stronger bond to increase fertilizer efficiency and reduce soil tie up.
- Resulting complex provides flexibility in application.
